

**AMENDMENTS****In the Claims**

1. (Currently Amended) A method for identifying excursions to general solutions provided by a solution network comprising:  
identifying excursions to a general solution on a system model basis;  
saving the excursions within the solution network on a system model basis; and,  
when accessing the solution network, searching the solution network to determine  
whether an excursion solution exists.
2. (Original) The method of claim 1 further comprising:  
storing the excursion exception within the solution network based upon a unique system  
identifier.
3. (Original) The method of claim 2 wherein:  
the unique system identifier is a service tag.
4. (Original) The method of claim 1 further comprising:  
storing the excursion exception within the solution network based upon a part identifier.
5. (Original) The method of claim 1 further comprising:  
storing the excursion exception within the solution network based upon a system model  
identifier.
6. (Original) The method of claim 1 further comprising:  
storing the excursion exception within the solution network based upon a system  
manufacture date.
7. (Original) The method of claim 1 further comprising:

searching the solution network for general solutions when no excursion solution exists,  
the searching the solution network to determine whether an excursion solution  
exists being performed before searching to solution network for general solutions.

8. (Original) The method of claim 1 wherein:  
the system includes an information handling system.
9. (Currently Amended) An apparatus for identifying excursions to general  
solutions provided by a solution network comprising:  
means for identifying excursions to a general solution on a system model basis;  
means for saving the excursions within the solution network on a system model basis;  
and,  
means for searching the solution network to determine whether an excursion solution  
exists when accessing the solution network.
10. (Original) The apparatus of claim 9 further comprising:  
means for storing the excursion exception within the solution network based upon a  
unique system identifier..
11. (Original) The apparatus of claim 10 wherein:  
the unique system identifier is a service tag.
12. (Original) The apparatus of claim 9 further comprising:  
means for storing the excursion exception within the solution network based upon a part  
identifier.
13. (Original). The apparatus of claim 9 further comprising:  
means for storing the excursion exception within the solution network based upon a  
system model identifier.
14. (Original) The apparatus of claim 9 further comprising:

means for storing the excursion exception within the solution network based upon a system manufacture date.

15. (Original) The apparatus of claim 9 further comprising:  
means for searching the solution network for general solutions when no excursion solution exists, the searching the solution network to determine whether an excursion solution exists being performed before searching to solution network for general solutions..

16. (Original) The apparatus of claim 9 wherein:  
the system includes an information handling system.

17. (Currently Amended) A solution network comprising:  
a knowledge repository, the knowledge repository storing information regarding general solutions to issues, the knowledge repository storing information relating to excursions to general solutions, the excursions being searchable on a system bases model basis;  
an excursion identifying module, the excursion identifying module identifying excursions to the general solutions on a system model basis;  
a search module, the search module searching the solution network to determine whether an excursion solution exists when accessing the solution network.

18. (Original) The solution network of claim 17 wherein:  
the excursions are identifiable based upon a unique system identifier..

19. (Original) The solution network of claim 18 wherein:  
the unique system identifier is a service tag.

20. (Original) The solution network of claim 17 wherein:  
the excursions are identifiable based upon a part identifier.

21. (Original) The solution network of claim 17 wherein:

the excursions are identifiable based upon a system identifier.

22. (Original) The solution network of claim 17 wherein:  
the excursions are identifiable based upon a system manufacture date.

23. (Original) The solution network of claim 17 further comprising:  
a general search module, the general search module searching the solution network for  
general solutions when no excursion solution exists, the searching the solution  
network to determine whether an excursion solution exists being performed  
before searching to solution network for general solutions..

24. (Original) The solution network of claim 17 wherein:  
the system includes an information handling system.
